As You Start Your Career, Focus on People Skills
Brains only take you so far. Smarts get you through the gate given that everyone in your cohort has the hard skills required to qualify for the position.
The fact is, the link between merit and success is forged through soft skills. This Harvard Business Review article stresses the importance of people skills. Click to read.

The Degrees and Skills Employers Most Want In 2015
A USA survey asked employers to rate the academic disciplines they target for their university graduate hires. At the top of the list: engineering degrees. Some 72% of companies said they want to hire students set to graduate in that discipline. Sixty eight percent are looking for business majors and 58% want computer science majors. The survey also asked employers to rate the skills they most value in new hires. Companies want candidates who can think critically, solve problems, work in a team, maintain a professional demeanour and demonstrate a strong work ethic. Click to read.
STEM subjects are highly sought after and there’s a huge demand for engineers in all fields. In Australia the Federal Education Minister Christopher Pyne, is pushing for science and maths to be compulsory for year 11 & 12 students. Click to read.

7 Skills You Never Knew You Needed for a Career in IT
When most people think of careers in IT, public speaking, mentoring, and negotiating skills rarely come to mind. But the reality is that soft skills like these are actually invaluable for a successful career in IT.
Business Insider examines seven skills including communication, problem solving and presentation. Click to read.

How To Rock A Job Interview
The vast majority of job-seekers treat a job interview like a command performance. They feel that they have to juggle and tap dance to please their audience. They think they’re auditioning for American Idol. This Forbes article includes 13 tips for an unbeatable interview. Click to read
3. Top 10 Most Valuable University Degrees 2014 – 2015
by Laura Close - Top 10 - Aug 25, 2014 (Source: MyCareerMatch)

When choosing a course of study at university, finding a subject that you are passionate about and will pay a living wage can be difficult. However, if you’re interested in one of the following degrees, you’re in luck! These 10 degrees pay the highest per hour.

1. Healthcare
This yet again falls to the top of our list. Anaesthetists by far make the most, at over $120 an hour in average hourly earnings. Other medical practitioners fall into this category as well, including dermatologists, gynaecologists, pathologists and many more. Also, with an ageing workforce and a potential for a high turnover rate, graduates are more likely to get a job after earning the degree. Hundreds of classes are available across Australia in this particular field.

2. Engineering
There are ample opportunities for engineers to make more than just a living wage in Australia. With several major mining companies announcing positive F2014 results, mining engineers have plenty of opportunity. Electronics and airplane maintenance engineers are also high on the pay scale. And with the car industry on the way out of Australia, aviation manufacturing and maintenance is looking to take over in the industry.

3. Law
As one of the most prestigious degrees you can earn, law degrees always come with high earnings. Be careful though, as you may break the bank to become a lawyer. This field of study and work is high on the list anywhere in the world, so whether you’re looking outside of Australia or in, chances are job opportunities and pay will be good.

4. Geology
Even after the shine of the Australian mining boom has started to fade, major mining companies and smaller exploration companies alike continue to fund exploration activities. Geologists are invaluable members of exploration teams, and make around $60 per hour in Australia. It’s a particularly good job for people who don’t want to spend the rest of their professional career at a desk.

5. Finance
As long as there’s business, accountants will have jobs. In big cities like Sydney and Melbourne, finance professionals are in high demand. Jobs can be found at both the corporate and personal finance levels, with plenty of high level positions in stock markets likes the ASX. Those in financial jobs make on average around $60 an hour.

6. Education
For those who never really want to leave school, becoming a university lecturer or tutor would not only allow you to continue to be immersed in your passion, but it also pays pretty well. Lecturers stand to make just north of $57 an hour. According to a recent article by The Australian, some people have recently been turned off of returning to school because of uncertainty over fees. However, with the continuing rise of the cost of living in Australia, university degrees will be important to securing adequate job opportunities.

7. Dentistry
Entry-level dentists make a fair bit more on average than other types of entry level employees in Australia. Although most dentists work in the field for an average of 20 years and move on, it’s a great way for a college graduate to establish themselves after graduation. And like Law, dentistry is respected worldwide as an important career path, which can open doors if you want to work internationally.
8. Business
This is a fairly wide-ranging category, covering a vast array of subjects. The best part about a business degree though is that you can work in virtually any industry on the corporate side of a business. A master’s degree holds much more weight than a bachelor’s, but any experience in a business setting is invaluable on your CV.

9. Computer Science/IT
Several big, global companies like Rio Tinto and UPS use analytics from millions of data points to help make smart financial and business decisions. Data analysts make this happen, and are in need in demand in Australia as more companies utilize data. The average hourly rate for systems analysts is just over $53 an hour.

10. Earth/Environmental Science
Australia is one of the most environmentally-minded countries in the world, making it no surprise that this degree would land in the top 10. Australia has 12 universities that rank in the global top 200 for earth science, and 13 for environmental science. Positions for this subject are available on either the corporate side or in the field, and again are invaluable on exploration projects for mining companies.
