Champions of maths, engineering

GOOD Shepherd’s Secondary Maths Engineering Tournament of the Minds (TOM) team recently created history when competing in the Australasian Pacific finals in Hobart.

The students have once again proven they are serious competitors in the TOM.

Their recent win was a first for any college in the history of TOM.

Over the past four years the college’s secondary maths engineering team has achieved second place honours, first place, first place and second place honours, which is the best result in the history of TOM. No state has won in secondary maths engineering for two years running, let alone an individual school achieving this feat over four years.

BRIGHT MINDS: Good Shepherd’s maths engineering TOM team winners.

Congratulations to all GSJC TOM competitors this year and particularly to Mr Polkinghorne and his winning team members:
